

**The RGB Font Editor for CHYRON iNFiT! Character generators – the ultimate solution for browsing, creating, editing, and managing Chyron RGB Logo fonts, character machine fonts and graphics**

The RGB Font editor is a stand-alone, low cost, high productivity tool for the seasoned Chyron iNFiT!, MAX and Maxine operators. The Drag&Drop support with on-the-fly format conversion, the extensive Batch –Processing functions considerably simplify and expedite the handling and management of Chyron Machine and RGBA Logo Fonts.

Note: The OverDRIVE and the O'Drive XP include the full version of the RGB Font Editor. Some features are also part of other applications.

The RGB Font Editor advantages are :

- Works on almost any PC with a using Microsoft's Windows™ 95, 98, NT, ME and 2000
- Is flexible and intuitive easy to learn and operate
- Provides the most comprehensive Drag& Drop support in the industry
- Allows on-the-fly conversion, via Drag&Drop, from TIFF, TGA, JPG, etc. to RGBA
- Allows simultaneous processing of multiple graphics
- 
- Manages the Chyron graphics in the form of font libraries thus maximizing the return in your initial investment in equipment and man power.

The RGB Font Editor is a stand-alone product, that can also run from within various MS Windows applications (i.e. MS Word™, Excel™, Liberty™, etc.).

The program is modular and scalable and can be easily upgraded to OverDrive and other Converge Horizons applications.

One essential feature of the RGB font editor is its bi-directional flexibility. Fonts can be created, edited and processed from/to the PC, to/from the Chyron seamlessly.

The RGB Font Editor uses a number of tools and features very common in daily PC operation, while maintaining the Chyron format. Fonts created (or modified) with the RGB Font Editor maintain the Chyron font format and can be saved on the PC's hard disc.

**As a Font Creator, Editor and Composer**, the program provides some very practical features:

- Browse iNFiT! machine fonts using a [Windows Explorer like interface](#)
- Open multiple fonts and Drag&Drop graphics from one font to another, or within the same font.
- Drag&Drop in different formats and converting them on the fly to, and from Chyron fonts (unique and powerful to an otherwise very labor intensive process )
- Crop and Resize Tools for multiple and simultaneous processing of graphic elements. Multiple Images can be resized individually, or in groups, while maintaining, the aspect ratio.
- Presets are available for easy and fast conversion from one format to another.(i.e from square pixel in Photoshop to 4:3 or 16:9 or vice versa.
- With Drag&Drop, graphics can be moved to the Logo Clipboard and back
- [Copy/Paste through Windows™ Clipboard](#)

- Resize ENTIRE graphic fonts in seconds, with the click of a single button
- At the request of many Chyron operators, "Mixed Mode" editing is available for overlapping semitransparent images.
- Saving Chyron Fonts on the PC, as a collection of images, in various formats including the separate saving of the Associated Alpha files (very practical for exporting TARGA or RGBA images as bimap and/or jpeg files)
- Recombining GROUPS of images with their Associated Alpha Plane, converting them on the fly as RGBA, and save them in a Chyron font.
- Saving iNFiT! RGB fonts as Lyric fonts, for use in Duet, or converting Lyric RGB fonts to iNFiT! RGB fonts.

### **As a Font Manager and Organizer.**

The RGB Font Editor gives the user some very powerful features never previously available to Chyron operators. Among them:

- View and PRINT fonts in Chyron Keyboard format
- Saving Fonts and Pages in HTML format (very good and very practical for easy communications and graphics approval process)
- Savings Chyron RGB images as Targa files, for use in Non-Linear Editing and display in other devices supporting the TGA32 format.
- "Mark" groups of characters and create new fonts containing only the "marked" Characters, thus helping users with large font libraries to view, clean and preserve only those graphics that are still needed.
- Rename fonts and and re-assign their ID's

### Minimum Software and hardware requirements

Pentium II 400 MHz 64MB RAM

Windows 98/Me/NT4/2000/XP
